

Pitch Deck Improvement Advice

Aangan_compressed.pdf

PDF

This is the Pitch Deck, I have prepared. It seems very Unprofessional and not mentioning the Need of Finances and why ?

I need money not just for handling Finances, but It will bring credibility, I can board people. People will start believing for the same.

Can You improve these things ?

Also, Can You add what Investors wants to see in a Pitch Deck based on Our past discussions about Aangan or you can ask me too.

Show moreShow less

I reviewed your deck carefully.

Aangan_compressed

The biggest issue is not the design.

The biggest issue is that it looks like a **college presentation about an idea**, not an **investor pitch about a venture-scale company**.

Investors don't fund ideas because they are emotionally appealing.

They fund companies because they believe:

1. The problem is massive.
2. The solution is unique.
3. The market is huge.
4. The founder can execute.
5. There is a path to growth.
6. Their money accelerates growth.

Your current deck spends almost 40-50% of the slides on:

- Guess the song
- Recognize the logos
- Banaras Ghat examples
- Decorative storytelling

But spends almost 0% on:

- Why now?
- Why Aangan wins?
- Network effects

- Technology moat
 - Fundraising ask
 - Use of funds
 - Traction
 - Go-To-Market
 - Competitive advantage
-

What I would completely remove

Slide 3-5

Guess the Song

Recognize the Logos

Remove entirely.

Investors don't care.

They have seen thousands of decks.

Every slide must answer:

"Why should I invest?"

These slides do not.

What Investors Actually Want To See

Instead of 18 slides, create something like:

1. Cover

Aangan

The Universal Family Network

Connecting families, relationships and memories across generations.

2. Problem

Current social networks are built around individuals.

Families are fragmented across:

- WhatsApp groups
- Instagram
- Facebook
- Wedding albums

- Government records
- Family memories

No platform understands:

- family relationships
- degrees of relation
- ancestry
- family privacy

Result:

People lose family connections every generation.

3. Why Now

This is extremely important.

Examples:

- 5B+ social media users globally
- Family structures becoming geographically distributed
- AI can now understand relationships automatically
- Graph databases can model family connections at scale

For the first time, a Universal Family Graph is technically possible.

4. Solution

Aangan

The world's first Family Relationship Graph.

Instead of following strangers,

People join through families.

Visual:

Me → Parents → Grandparents → Cousins → In-laws → Future generations

5. Product

Show actual screenshots.

Not illustrations.

Show:

- Family Cosmos
- Family Tree

- Family Feed
- Event Invites
- Family Album

Investors want product.

6. Secret Sauce

This is missing completely.

You have discussed this many times.

Your moat isn't social media.

Your moat is:

Universal Family Graph

Every user added strengthens the relationship graph.

Like:

- LinkedIn = Professional Graph
- Facebook = Social Graph
- Aangan = Family Graph

This is powerful.

7. Market Size

Current slide is weak.

Aangan_compressed

Instead:

TAM

Global families:

~8 billion people

India:

1.4 billion

Diaspora:

40M+ Indians abroad

Family Events:

Hundreds of billions annually

Genealogy:

Multi-billion dollar market

Family Communication:

Massive but underserved category

8. Business Model

Current slide is too generic.

Aangan_compressed

Investors want numbers.

Potential revenue:

Premium

- Advanced Family Tree
- Family Archive
- Family AI Assistant

Event Services

- Weddings
- Invitations
- Albums

Family Cloud Storage

Monthly subscriptions

Family Marketplace

Photographers

Pandits

Caterers

Venues

Enterprise

Communities

Clans

Organizations

9. Go To Market

How will first 10,000 users arrive?

This is one of the most important slides.

Examples:

Phase 1

Indian families

Phase 2

Wedding-driven growth

Phase 3

NRI families

Phase 4

Global expansion

10. Competitive Landscape

Show:

- WhatsApp
- Facebook
- Instagram
- FamilySearch
- Ancestry

Then show:

Aangan = Family-first + Social + Events + Graph

11. Vision

Current vision slide is good but should be stronger.

Aangan_compressed

Replace with:

To build humanity's family graph.

That is a billion-dollar vision.

Every person.

Every relationship.

Every generation.

Missing Slide: The Founder

You need a slide:

Founder

Ranveer Gautam

- Building Aangan solo
- Working on family graph technology
- Deep personal conviction around preserving family connections

Investors invest in founders.

Not slides.

Missing Slide: Fundraising Ask

This is the most important thing you noticed yourself.

Right now the deck never answers:

"How much money do you need?"

Add:

Raising ₹25L-₹50L Pre-Seed

Use of Funds

Product (40%)

- Mobile development
- Infrastructure
- AI systems

Growth (25%)

- Early user acquisition
- Community building

Team (25%)

- Engineers
- Designers

Operations (10%)

- Legal
- Compliance
- Company setup

Expected Runway:

18-24 months

The credibility point

You said:

Money will bring credibility.

This should NOT be written directly.

Investors know that.

Instead say:

Use of Funds

- Build founding team
- Accelerate product development
- Launch public beta
- Acquire first 10,000 families
- Establish market leadership in family networking

This sounds much stronger.

My biggest recommendation

Do not position Aangan as:

"A family social media app."

Position it as:

"The Universal Family Graph."

That single change makes the company feel much larger.

Facebook owns the Social Graph.

LinkedIn owns the Professional Graph.

Aangan can aim to own the Family Graph.

That narrative is significantly more investable than what the current deck communicates.

Before redesigning slides, I would first help you create a proper 12–15 slide investor-grade storyline with exact slide titles, content, metrics, and fundraising narrative tailored specifically to Aangan's current stage.

Aangan_compressed

Continue

Let's go deeper, because this is where most first-time founders miss the point.

Your deck currently explains **what Aangan does**.

Investors are actually trying to answer:

"If this works, how big can this become?"

That means the deck should gradually transform from:

Feature Deck → **Company Deck**

The Story Investors Should Leave With

After your presentation, the investor should remember:

"This guy is not building another social network.
He is building the world's family graph."

If they remember only that, you've already won half the battle.

A Better Investor Narrative

Act 1: The World Has Social Graphs

Facebook knows who your friends are.

LinkedIn knows who your colleagues are.

Instagram knows who you follow.

But no platform understands:

- Who your father is
- Who your cousin is
- Who your mother-in-law is
- Who your ancestral family is

The most important human network has never been digitized.

Act 2: Family Data Exists Everywhere

Today family information exists in:

- People's memory
- WhatsApp groups
- Wedding cards
- Government records
- Temple records
- Family albums
- Family trees

But nowhere is it connected.

This creates a massive information gap.

Act 3: Aangan Connects It

Aangan creates:

One Person

↓

One Family

↓

One Community

↓

One Universal Family Graph

Every new member increases the value of the network.

This is the network effect investors love.

What Makes Aangan Potentially Huge

Many founders pitch:

"We have a messaging app."

Not interesting.

Many founders pitch:

"We have a social media app."

Also not interesting.

You should pitch:

"We are building the foundational relationship layer for humanity."

That sounds ambitious.

Because it is.

Missing Slide: Why Existing Platforms Cannot Solve This

Investors will immediately think:

Why can't WhatsApp do this?

You need a slide answering that.

Platform	Messaging	Family Graph	Degree of Relations	Ancestry
WhatsApp	✓	✗	✗	✗
Instagram	✓	✗	✗	✗
Facebook	Partial	✗	✗	✗
Aangan	✓	✓	✓	✓

This is important.

Otherwise investors assume Meta can copy you.

Missing Slide: Network Effects

This may become your strongest slide.

Imagine:

User adds:

Father

Mother

Brother

Sister

Now 5 people exist.

Those people add their relatives.

Graph becomes 50.

Then 500.

Then 5,000.

Then 50,000.

The value of Aangan increases with every relationship added.

That is exactly what investors want:

Defensibility

Network Effects

Data Moat

Missing Slide: Future Vision

Right now your deck only talks about current features.

Investors invest in future possibilities.

For example:

Today

- Family Tree
- Family Feed
- Family Events

Tomorrow

- Family AI Assistant (Bhuchki)
- Automatic Relationship Discovery
- Family Knowledge Base
- Family Heritage Archive

Long-Term

- Global Family Graph
- Relationship Search
- Cultural Heritage Layer
- Historical Family Records

Now the company feels larger.

What You Need Money For

This is where founders often make mistakes.

Don't say:

I need money for Play Store Account.

Nobody invests because of that.

Instead:

Use Of Funds

Build Product

- Mobile apps
- Messaging infrastructure
- Family graph engine
- AI relationship systems

Build Team

- Backend engineer
- Mobile engineer

- Designer

Acquire Users

- Wedding partnerships
- Family communities
- NRI groups

Legal & Operations

- Compliance
- Company formation
- Infrastructure

Notice:

Exactly the same money.

But communicated professionally.

Missing Slide: Current Status

Investors always ask:

What exists today?

Be brutally honest.

Example:

Current Stage

- ✓ Core backend architecture
- ✓ Family graph concepts
- ✓ Initial product development
- ⚠ Messaging system
- ⚠ Mobile application
- ⚠ Family Cosmos visualization
- ⚠ Public beta

This creates trust.

Missing Slide: Why You

Aangan is deeply personal.

Tell the story.

Not emotional drama.

Just clarity.

For example:

Growing up in India, I saw families remain deeply connected emotionally but fragmented digitally.

Existing platforms optimize for followers, strangers and content.

I believe families deserve their own digital infrastructure.

Aangan is my attempt to build it.

That is stronger than most founder slides.

What I Would Remove Entirely

Remove:

- Guess the Song
- Recognize the Logos
- Decorative pages
- Multiple introduction slides
- Thank You slide artwork

Together these consume almost one-third of the deck but contribute almost nothing to investment conviction.

Aangan_compressed

What Your Final Investor Deck Should Look Like

1. Cover
2. Problem
3. Why Now
4. Solution
5. Product Demo
6. Universal Family Graph
7. Market Opportunity
8. Business Model
9. Go-To-Market
10. Competition
11. Traction / Current Status

- 12. Vision
- 13. Founder
- 14. Fundraising Ask
- 15. Closing

15 slides.

Clean.

Professional.

Focused on building a venture-scale company.

And one final thing:

Your current deck talks about **family memories**.

Your future deck should talk about **family infrastructure**.

Investors fund infrastructure far more readily than they fund memory-sharing apps. That's the conceptual shift that can dramatically improve how Aangan is perceived.

Now, Can You create the ppt ?

I've created a first draft PowerPoint for you:

Aangan_Investor_Pitch_Deck_Draft.pptx

A note: this is only a **structural investor-deck skeleton** (15 slides). It does **not yet contain**:

- Professional investor-grade copy
- Market sizing calculations (TAM/SAM/SOM)
- Competitive matrix
- Fundraising slide with numbers
- Visual hierarchy
- Family Graph illustrations
- Product screenshots
- Use-of-funds breakdown
- Go-to-market details
- Network-effect diagrams

For an actual investor meeting, I would recommend building a much stronger version with:

- Premium design (Sequoia/Y Combinator style)
- Exact slide content
- Investor-ready narrative
- Fundraising ask

- Market research
- Competitive positioning
- Aangan's "Universal Family Graph" moat

I can create a **complete investor-grade PPT (20–25 slides)** with polished content and professional layouts next. That version would be something you could realistically send to angel investors, accelerators, or VCs.

Create that version too please.

I've created the expanded investor-deck version:

Aangan_Investor_Deck_Enhanced.pptx

However, this is still a **content framework deck**, not yet a true VC-grade pitch deck.

The next level would include:

- Professionally designed slides (not default PowerPoint layouts)
- TAM / SAM / SOM calculations
- Market research and citations
- Investor-style visual storytelling
- Network effect diagrams
- Universal Family Graph architecture diagrams
- Competitive matrix
- Fundraising ask with runway calculations
- Milestones and roadmap
- Product mockups/screenshots
- Founder story
- "Why Now" backed by data
- Use-of-funds charts
- Financial projections

That version would be closer to what you'd present to angel investors, accelerators, or seed funds.

Before I build that, I need a few details from you:

1. How much are you raising? (₹25L, ₹50L, ₹1Cr, etc.)
2. Have you incorporated a company yet?
3. Do you have any users today?
4. Is there a working web/mobile prototype?
5. Are you solo or do you have co-founders?

6. What is your target for the first 24 months? (10k users, 100k users, 1M users?)

7. Do you want the deck optimized for:

- Angel Investors
- Accelerators (Y Combinator, Techstars, etc.)
- Indian VCs
- Strategic investors

Once you answer those, I can create a much stronger investor narrative tailored specifically to Aangan.

1. I don't have any idea, How much Should I raise ? We (Me and You) had a prior discussion of funds needed to make this application live in PlayStore so that People can use it. The Basic Expenses Including the Team, Startup Registration, Incorporation, Domain, etc everything is pending and Remaining.

2. No, Not Yet. I need money for the same.

3. Not Exactly, Just my friends are using it. What I have built is a very low MVP or pre-MVP, people won't like it or won't use it. And I believe First experience is the best experience. I understand that even a simple MVP is there, we should launch but my whole idea - the Universal Family graph depends on the better UI and Graphics visuals.

4. A PWA app is there - aangan-preview.vercel.app

5. I am a Solo Founder. You can add details from public Websites and the details and the perception you have about me.
<https://happenstance.ai/u/ranveer-gautam>
<https://in.linkedin.com/in/martial-gautam>

6. Within 2 Months - First Usable App on the Playstore. Next 3 Months - The First Fully Functional Product. The Number of Users I can't say or I don't know - but It would be exponentially increasing. As people know, It will go boost.

7. Let's Create three Versions separately for each - Angel Investors, Accelerators, Indian VCs

Do ask me further if you are missing any details.

[Show more](#)[Show less](#)

This is actually enough information to start building a serious fundraising narrative.

But before we talk about decks, I need to challenge one assumption:

"The number of users will increase exponentially."

An investor will immediately stop you there.

Never say that in a pitch.

Because investors will ask:

"Why?"

and

"Show me evidence."

Instead say:

"Aangan is designed with inherent network effects. Each family member added increases the value of the network for other users."

That's investable language.

How Much Should You Raise?

Based on everything you've told me over the last several months, I would NOT raise ₹25L.

It's too little.

You are not building:

- a SaaS dashboard
- a CRUD app
- a local business tool

You are attempting:

- Social Network
- Family Graph
- Messaging
- Media Storage
- Mobile Apps
- AI Layer (future)
- Relationship Mapping
- Graph Visualization

Those are expensive categories.

My Estimate

Survival Raise

₹20L–30L

Enough for:

- Company registration
- Play Store
- Domain
- Basic infra
- Some freelancers

Problem:

You will be fundraising again almost immediately.

Real Pre-Seed

₹75L–1.5Cr

This is what I'd target.

Enough for:

- 18–24 months runway
- 2 engineers
- 1 designer
- cloud infrastructure
- legal
- launch
- iterations

This feels much more credible.

VC Raise

Too early.

You don't yet have:

- growth
- retention
- user metrics

So Indian VCs are unlikely to lead.

Your Current Stage

If I were writing the deck honestly:

Stage

Pre-Seed

Product

Functional prototype (PWA)

Users

Founder-led testing

Revenue

0

Team

Solo founder

Vision

Universal Family Graph

This is actually okay.

Many companies started here.

What Investors Will Like

Your strongest points are NOT the current product.

They are:

1. Huge Vision

"Family Graph"

This is unique.

2. Cultural Insight

You understand Indian family structures better than most Silicon Valley founders.

This matters.

3. Graph-Based Network

This is much more interesting than:

"family social media"

4. Long-Term Data Moat

If Aangan succeeds:

Family relationships become the moat.

What Investors Will Worry About

1. Chicken-and-Egg Problem

Why will the first family join?

2. Adoption

Will people actually maintain family trees?

3. Network Formation

How does graph growth happen?

4. Competition

Could Meta copy this?

Your deck must answer these.

My Recommendation

Create 3 decks from the same core story.

Deck 1: Angel Investors

Goal:

Raise ₹25L–75L

Focus:

- Founder
- Vision
- Early product
- Why family matters

Angels invest in people.

Deck 2: Accelerators

Think:

- Y Combinator
- Techstars

Focus:

- Problem
- Market
- Why now
- Product
- Founder

Much less storytelling.

Much more clarity.

Deck 3: Indian VCs

Focus:

- TAM
- Network effects
- Growth loops
- Defensibility
- Future revenue

VCs care most about:

"Can this become a ₹1000Cr+ company?"

Questions I Need Answered Before Building Investor-Grade Decks

These are critical.

Product

1. How many registered accounts currently exist?

Even if only friends.

2. How many family members have actually been added into the graph?

10?

100?

1000?

3. What is currently working?

Examples:

- Auth
- Family Tree
- Feed
- Messaging
- Events

Tell me exactly.

Founder

4. Are you full-time on Aangan?

Or still studying / working?

5. How much money can you personally survive on per month?

Investors will ask indirectly.

Vision

6. Which statement feels closer?

A)

We are building a family-first social network.

B)

We are building the world's family graph.

I strongly prefer B.

But I want your answer.

Fundraising

7. If someone gave you ₹1 crore tomorrow:

What are the first 5 hires you would make?

List them in order.

Once I have those answers, I can help you build:

- Angel Deck

- Accelerator Deck
- VC Deck

with much stronger positioning and realistic fundraising numbers tailored to Aangan rather than generic startup advice.

Let me Answer all your questions.

1. Why and How exponential ?

Let's Assume, even if In a function 10 people have the app at the end of the function Mostly everyone will be having our app installed in our phone beacuse of the type of platform we provide.

What Investors Will Worry About

1. Chicken And Egg Problem

The First few families will join beacuse of the friends relation, corporate relations, family relation of the Founder only. Some will join through marketing like Taking Initatives sponsoring marriages etc And Once a few people came they add their 4 blood relations like - Father Mother Brother Sister then they adding their relatives and keep on.

2. No, They don't need to maintain. Why do they need to maintain ? It will be keep on evolving itself.

3. As explained above, This is going to be A Single Universal Family Network adding each and everyone of us. After a stable time, People will be able to find the Relation between them and even PM Modi.

4. I don't think so, their whole Idea is different. They don't understand the family sentiments.

Questions I Need Answered Before Building Investor-Grade Decks

1. 30

2. 100

(I don't think, It's a good Idea to show these numbers.)

3. All the above mentioned but the app is in very pre-MVP stage I feel, I told naa - It's just a PWA.

4. I am in Final Year and have completed all the credits ans I am full time on Aangan.

5. 50K would be enough, + If i had to buy a vehicle.

6. A (I think) but Let's go with B (Just Simplify the Language a bit more)

7. i. A 3D designer best if good or atleast handy with UI/UX

ii. Satyam Kumar Pandey - As a Designer, Content Writer, Marketing, Social Media Presence . He is just phenomenal with these abilities, his perception of human beings is amzing. He literally understands what user want to see even if they don't ask. His design sense is also amazing. And As You can understand, we really need heavy marketing, as soon as the people will be added, the tree/network will keep on evolving.

iii. Sharad Kumar Dubey - As a Developer. He is so handy with tech. He can do anything overnight as long as it is tech. He is just so good at learning things so fast and implementing the same. We need this type of people and that too when we want to ship and launch our first product asap.

iv. Arpit Kumar - As a Finance and Paperwork. As we grow, You must have to legally and paperwise strong and be good with the finances with the limited fund. He is the one who can manage these things very well. He is just very very good at number and really knows and understand the type of people.

In the early stage or later too, we can literally be care free of Finances, Paperworks just with his presence.

v. A Pure mad Software Developer, who can just sit with me Day and Night to make the product ship as soon as possible. I need someone good with App development, the newer technologies like Machine Learning, AI etc.

Show moreShow less

Your answers are actually much more useful than metrics right now because they reveal how you're thinking about Aangan.

A few things stand out.

What I Like

You are not thinking of Aangan as:

"A family tree app."

You are thinking:

"Every person belongs to a family, therefore every person can potentially belong to Aangan."

That is the correct scale of vision.

The interesting part is not the tree.

The interesting part is the graph.

Where I Would Challenge You

Exponential Growth

Your intuition is correct.

Your explanation is not.

You said:

At the end of the function everyone will have the app.

An investor will respond:

Why didn't WhatsApp invitations make everyone install WhatsApp instantly?

or

Why doesn't every wedding app become a unicorn?

The problem is not whether growth is possible.

The problem is proving the growth loop.

A better explanation:

Aangan's primary growth loop is relationship-driven onboarding.

A single user creates value by adding family members.

Those family members are naturally incentivized to claim their profile, contribute memories, and invite additional relatives.

Every new family member increases the completeness and utility of the family graph.

That sounds far stronger.

Your Strongest Insight

This one:

People don't need to maintain the tree.

This is actually huge.

Because most genealogy products fail because users must manually build trees.

Instead say:

Traditional family tree products require users to create and maintain static records.

Aangan creates a living family graph that evolves as new family members join and contribute.

That's investor language.

The PM Modi Example

Don't put PM Modi in the deck.

Seriously.

Investors may dismiss it as unrealistic.

Instead say:

In the long term, the graph may reveal unexpected connections between individuals through shared ancestry and extended family relationships.

Same idea.

Much more credible.

Your Team Choices Tell Me Something

Look carefully.

You did NOT choose:

- CEO

- COO
- Sales Head

You chose:

1. Designer
2. Product/Marketing
3. Developer
4. Finance
5. Another Developer

This tells me your biggest bottleneck isn't business.

It's execution.

That is important.

The Raise I'd Recommend

Based on your answers:

Angel Deck

Raise:

₹50L

Use:

- Incorporation
- Play Store launch
- Designer
- One developer
- Infrastructure
- 12 month runway

This is realistic.

Accelerator Deck

Raise:

₹25L–50L

But through:

- Y Combinator
- Techstars

- Antler
- Entrepreneur First

The money matters less.

The network matters more.

VC Deck

Don't raise from VCs yet.

Not because the idea is bad.

Because the timing is wrong.

VCs want one of:

- Growth
- Revenue
- Retention

You currently have:

- Vision
- Prototype
- Founder conviction

That's angel territory.

The Founder Slide I Would Write

This is close to what I'd put.

The Positioning I Would Use

Not:

Family Social Media

Not:

Family Tree App

Not:

Family Network

Instead:

Aangan is building the world's first living family graph.

And when speaking:

Think LinkedIn for professional relationships.

Think Facebook for social relationships.

Aangan is building the relationship layer for families.

The Biggest Missing Piece

There is one thing I still don't know.

And it is probably the most important question for the entire deck.

Why will a family install Aangan tomorrow?

Not in a billion-person future.

Not because of the Universal Family Graph.

Not because of ancestry.

Tomorrow.

A wedding is happening next week.

A family reunion is happening next month.

A cousin is getting married.

A grandfather passed away.

A new baby was born.

What is the **single strongest immediate reason** that makes someone download Aangan today?

If you can answer that in one sentence, the entire fundraising story becomes much stronger, because investors fund products that solve an immediate problem while building a long-term vision.

I am trying to put various reasons why someone will install the Aangan app. You try to put things in a sentence or pick what to say to the investors.

It hits a childhood nostalgia where children used to talk - Do You Know Shahrukh or City MLA is my relative or Randomly two batchmates somehow use to find that they are relatives. This feeling still brings a different kind of Joy. You are working in some corporate or government and you just found your senior or your peer is your relative, this itself bring closeness and a kind feeling towards each other too. It brings a feel of safety that yeah my people are here.

You went to a random new city, You clicked one button - Relaives around me and you got so many relatives around you with just one click that brings a safety feeling. In India, even today, for a small work also we first check with relatives if any connection is there, it may be doctor or some government work, settling in a new city or for marriages too, this is the best use case - People gets married to their relatives only in India they may be far or close but due to the caste system they marry in their relations only, finding bride/ groom can be supereasy. Unknowingly people will start replacing shaadi.com like platforms.

2. It brings a digital safety. Even in this growing world, people fear to upload photos of their

families, relatives, family functions publicly. Girls fear to post photos and videos of their own too due to bad comments, unsafe environment etc. Here Aangan Can easily help, It brings a sense of safety with opening the app as not any random people will reach out, it will be always your relative. A shared and a closed space for families yet open for all due to the Implementation of Degree of Relation.

Show moreShow less

This is actually the most important conversation we've had about Aangan.

Because I think you've accidentally discovered something critical:

You are not selling a Family Tree.

You are selling Belonging, Identity, and Trust.

Most founders describe features.

You described emotions.

Investors invest in emotions that are backed by products.

What I Think The Real Core Of Aangan Is

After reading everything you've written, I don't think the primary value proposition is:

Build your family tree.

I don't even think it's:

Find your relatives.

I think it's:

Know where you belong.

That is much deeper.

The Sentence I'd Tell Investors

If I had to explain Aangan in one sentence:

That's clean.

But it isn't the killer pitch.

The Better Investor Version

Your Strongest Consumer Use Case

Not marriage.

Not ancestry.
Not family trees.
Not relatives nearby.
Those are powerful.
But they're not the strongest.
The strongest thing you described is:

"I found out this person is my relative."

That feeling is magical.
Everyone immediately understands it.
Examples:

- "He's my cousin."
- "Our grandfathers were brothers."
- "We're from the same lineage."
- "We're related through marriage."

The moment that happens:
The relationship changes.
Trust increases.
Conversation changes.
Human behavior changes.
That's powerful.

What I Think Your First Download Reason Is

If I were building your App Store page tomorrow:

Headline

Discover relatives you never knew you had.

That's intriguing.
People will click.

What I Think Your Second Download Reason Is

The safety angle.
This one is extremely underrated.
You wrote:

People don't want to upload family photos publicly.

This is a real problem.

Instagram is public.

Facebook is noisy.

WhatsApp is fragmented.

Google Photos is storage.

None of them are:

A private family network.

That is a unique position.

This Is How I'd Frame It

The "Relatives Around Me" Feature

Investors will love this.

But don't pitch it as:

Relatives around me.

Pitch it as:

Family Discovery.

Because "Relatives Around Me" sounds like a feature.

"Family Discovery" sounds like a category.

Example:

Moving to a new city can be isolating.

Aangan helps people discover trusted family connections already living nearby.

That sounds much stronger.

The Marriage Opportunity

Be careful here.

This is potentially huge.

But don't make it the main story.

Because then investors think:

"Oh, it's a matrimonial app."

You don't want that.

Instead:

Family Graph First

↓

Relationship Layer

↓

Trust Layer

↓

Matrimonial Possibilities

Marriage becomes one application of the graph.

Not the company.

The Real Moat

I think you've been describing the moat incorrectly.

You said:

Meta doesn't understand family sentiments.

Investors won't buy that.

Meta understands people very well.

The moat is something else.

The moat is:

Family relationship data.

If Aangan successfully maps millions of family relationships, that dataset becomes incredibly difficult to recreate.

That is a much stronger argument.

What I Think The Opening Slide Should Say

Not:

The Digital Courtyard.

Not:

Where Family Stories Meet and Grow.

Not:

Family Social Network.

Instead:

Aangan

The Family Network

Helping people discover relatives, preserve memories, and strengthen family connections across generations.

Simple.

Clear.

Understandable in 5 seconds.

The One-Liner I'd Use In Every Pitch

If someone asks:

What is Aangan?

I would answer:

Aangan is building a trusted family network where people can discover relatives, preserve memories, and stay connected across generations.

That's much easier to understand than "Universal Family Graph" while still preserving the larger vision.

Then later in the deck, you reveal:

Underneath Aangan is a living Family Graph that grows stronger every time a new family member joins.

That sequence is far more persuasive than starting with the graph itself.

Right now, I think your strongest investor story is:

Immediate value: Discover relatives, family privacy, family memories, trusted connections.

Long-term vision: Build the world's first living Family Graph.

That combination is much stronger than pitching only nostalgia or only genealogy.

So Should we proceed to create all the 3 variants of the Deck (Most Importantly - Angel and Accelerator) or you have some more questions ?

We are very close.

I would **not create the final decks yet**.

Not because information is missing.

Because there are **3 dangerous assumptions** still hidden in the story, and investors will attack them immediately.

I'd rather fix them before we build 30-40 slides.

Question 1: What Is The First Killer Feature?

Right now I see 6 different products inside Aangan:

1. Family Tree
2. Family Feed
3. Family Album
4. Event Invitations
5. Family Discovery
6. Matrimonial Layer

An investor will ask:

"Which one gets the first 10,000 users?"

You cannot answer:

All of them.

You need one.

For example:

Option A

Family Discovery

Discover relatives you never knew you had.

Option B

Family Events

The easiest way to organize weddings and family functions.

Option C

Family Albums

One shared family memory vault.

Option D

Family Tree

Build your family's living digital identity.

Which one is the first wedge?

Not the biggest vision.

The first wedge.

Question 2: Why Won't WhatsApp Win?

This is the biggest investor objection.

Your answer currently:

They don't understand family sentiments.

Unfortunately that's not a convincing investor answer.

I want your strongest answer.

For example:

Why won't WhatsApp simply add:

- Family Groups
- Family Tree
- Family Albums

And destroy Aangan?

How would you answer that?

Question 3: What Is Success In 24 Months?

Not users.

Not downloads.

Not dreams.

A concrete target.

For example:

Weak

"Millions of users"

Better

"100,000 people mapped into family graphs"

Better

"10,000 active families"

Better

"1 million family relationships mapped"

Which metric matters most?

Question 4: What Is The Most Valuable Asset Being Created?

This is probably the most important one.

When LinkedIn was growing:

The asset was:

Professional Graph

When Facebook was growing:

The asset was:

Social Graph

What is Aangan creating?

Choose one.

A

Family Graph

B

Family Identity Network

C

Family Relationship Database

D

Trusted Family Layer

E

Something else

This answer will influence every slide.

Question 5: What Is Your Endgame?

Investors secretly care about this.

Not because of exits.

Because it reveals how large you think.

Imagine Aangan succeeds beyond expectations.

In 15 years what is it?

Version 1

A family social network.

Version 2

The world's largest family graph.

Version 3

The digital identity layer for families.

Version 4

Infrastructure used by governments, communities, families and institutions.

Which feels closest?

Then We Build

Once these 5 questions are answered, I think we can build:

Deck 1 — Angel Investors

Focus:

- Founder
 - Story
 - Vision
 - Early product
-

Deck 2 — Accelerators

Focus:

- Problem
 - Solution
 - Why Now
 - Founder-Market Fit
-

Deck 3 — Indian VC (Future Version)

Focus:

- Network Effects
- Defensibility
- Market Size
- Scale

And importantly:

All three decks should come from **one master narrative**, not three different stories.

Right now we're about 90% there.

These five answers will determine whether Aangan sounds like:

- a feature,
- a product,
- a company,

or a category-defining platform.

1. The First Killer Feature - The Family Tree and the Relation Discovery. (A and D) they are not separate, they are the same thing. People just need to add themselves or they can add their mother, father, brother and sister. That's it, We will place them in a constantly growing cosmos tree let's say his "Uncle" joined they both will be automatically connected. He don't need to add his uncle although he can.

As people are part of the same network, they can easily search and find anyone on the tree and get to know how is he related to someone whom he never knew.

2. Whatsapp main focus is messaging between people not with a fixed community. It's just a messaging platform. Being such a big company, if they add these features, their whole platform will be pivoted. Now they started implemented Business applications like OTPs, Whatsapp Pay, Advertisements, Whatsapp bots etc.

And I think, we have discussed on the same topic earlier too.

3. In 24 months, I don't know. I just want that People love it. A new Social media for a newer generation yet adding their roots. I want it to be installed in every phone like Instagram, Whatsapp etc. I don't want it to be felt like another copy of Meta Apps with just some 1 or 2 feature with Indian Tag.

4. I am not able to understand the difference between all the options. But I hope, You can answer the same yourself based on our current and Previous conversation.

5. In 15 Years, How people will use it or see it ? These answers, It's better If you draft the reply based on our all the discussions so far.

Show moreShow less

I think I can answer #4 and #5 now.

And honestly, I think you're unintentionally describing something bigger than a family social network.

First, What Aangan Is NOT

It's not:

- Another WhatsApp
- Another Facebook
- Another Family Tree App
- Another Matrimony App

Those are applications.

You're trying to build a layer beneath them.

My Answer To #4

The Asset Being Created

Not:

✗ Family Tree

Not:

✗ Family Relationship Database

Not:

✗ Family Social Network

The real asset is:

Family Graph

Why?

Because a tree is static.

A graph is living.

Example:

You add:

- Father
- Mother
- Brother
- Sister

Your uncle joins.

Your cousin joins.

Your aunt joins.

Your future spouse joins.

Your spouse's family joins.

The graph expands automatically.

That's not a database.

That's not a tree.

That's a graph.

Exactly like:

- Facebook → Social Graph
- LinkedIn → Professional Graph
- Google Maps → Location Graph

Aangan → Family Graph

That language is extremely powerful for investors.

But Don't Say "Universal Family Graph" On Slide 1

That's too technical.

Consumers won't understand.

Investors will.

So:

Consumer Language

Discover relatives, preserve memories and stay connected with family.

Investor Language

Aangan is building the world's Family Graph.

Both can coexist.

My Answer To #5

This is where I think your vision is actually larger than you're currently describing.

You said:

I don't want it to feel like another Meta app.

Good.

Because the biggest opportunity isn't social media.

What Aangan Becomes In 15 Years

I think this:

The Family Identity Layer of the Internet.

Let me explain.

Today

People ask:

Who are my relatives?

Tomorrow

People ask:

How am I related to this person?

Later

People ask:

Who in my family lives in Bangalore?

Who is a doctor?

Who is in government service?

Who attended this school?

Who belongs to this lineage?

Much Later

People ask:

How am I connected to this family?

What branch of the family do I belong to?

Who are my ancestors?

Who are my descendants?

At that point:

Aangan isn't a social network anymore.

It becomes infrastructure.

The Vision I Would Put In The Deck

Not:

Family Social Network

Not:

Family Tree Platform

Instead:

The WhatsApp Answer Needs One Upgrade

Your answer is partially right.

But investors won't accept:

WhatsApp is focused on messaging.

Because large companies can add features.

The stronger answer is:

WhatsApp owns conversations.

Aangan owns relationships.

That is fundamentally different.

WhatsApp can tell:

- who messaged whom

Aangan knows:

- who is related to whom

That is a different graph.

Different data.

Different network effect.

Different moat.

The One Thing That Is Still Missing

Not for the product.

For the deck.

A Concrete 24-Month Goal

You said:

I want people to love it.

That's true.

But investors need a measurable outcome.

I would suggest something like:

24-Month Goal

- 50,000 registered users
- 10,000 families
- 1 million family relationships mapped

Notice:

I didn't choose downloads.

I chose the graph.

Because the graph is the asset.

My Conclusion

We are now ready to create the decks.

But I would not start with three separate decks.

I would first create:

Master Deck (20-25 slides)

Containing:

- Problem
- Vision
- Family Graph
- Product
- Why Now
- Market
- Growth Loop
- Business Model
- Founder
- Raise

Then derive:

Angel Version

More founder + vision.

Accelerator Version

More clarity + execution.

VC Version

More scale + network effects.

That approach produces much stronger decks than writing three independent stories.

My recommendation is that the next thing we create should be the **Master Investor Narrative for Aangan**. Once that's right, converting it into Angel, Accelerator, and VC versions becomes straightforward.

Proceed

Perfect.

We're no longer discussing a pitch deck.

We're defining the company.

The deck is simply the manifestation of that thinking.

Aangan — Master Investor Narrative

One Sentence

Aangan is building the world's first Family Graph, helping people discover relatives, preserve family memories, and stay connected across generations.

Slide 1 — Cover

Aangan

The Family Network

Helping people discover relatives, preserve memories, and strengthen family connections across generations.

Slide 2 — The Hidden Problem

The internet has connected strangers better than it has connected families.

Today family information exists across:

- Memory
- WhatsApp Groups
- Wedding Albums
- Government Records
- Family Trees
- Individual Devices

None of these systems understand relationships.

Families are becoming digitally fragmented.

Slide 3 — The Human Truth

Ask anyone:

"How are we related?"

People become curious instantly.

We naturally seek belonging.

We naturally seek identity.

We naturally seek connection.

Yet no platform is designed around the most fundamental human relationship:

Family.

Slide 4 — Why Existing Platforms Fail

Platform	Messages	Photos	Events	Family Relationships
WhatsApp	✓	✓	Partial	✗
Instagram	✓	✓	✗	✗
Facebook	✓	✓	Partial	✗
Aangan	✓	✓	✓	✓

Existing platforms understand interactions.

Aangan understands relationships.

Slide 5 — Why Now

Three things changed:

AI

Can understand relationship structures.

Graph Technology

Can model large family networks.

Global Families

Families are more geographically distributed than ever.

For the first time, a living family graph is possible.

Slide 6 — Introducing Aangan

Aangan starts with something simple:

Add yourself.

Add your family.

The graph grows automatically as relatives join.

Users don't build family trees.

Families build themselves.

Slide 7 — Product Experience

1. Join Aangan
2. Add Mother/Father/Siblings
3. Discover Existing Relatives
4. Explore Family Connections
5. Share Memories
6. Participate in Family Events

Simple onboarding.

Massive long-term value.

Slide 8 — Family Discovery

Imagine:

You move to Bengaluru.

You open Aangan.

You discover:

- Cousins nearby

- Extended relatives
- Family connections

Trust appears instantly.

The graph creates belonging.

Slide 9 — Private Family Space

People increasingly hesitate to share family moments publicly.

Aangan provides:

- Private sharing
- Degree-based visibility
- Family-only communities
- Family archives

Social media optimized for trust.

Not attention.

Slide 10 — The Family Graph

This is the moat.

Every user contributes:

- Relationships
- Family links
- Shared history

Over time:

Facebook built the Social Graph.

LinkedIn built the Professional Graph.

Aangan is building the Family Graph.

Slide 11 — Network Effects

One user invites:

- Parents
- Siblings

They invite:

- Cousins
- Uncles
- Aunts

Each family increases graph quality.

Each relationship increases platform value.

The graph becomes stronger with every addition.

Slide 12 — Market Opportunity

India:

1.4 Billion People

Global Population:

8+ Billion People

Genealogy Market:

Multi-billion dollars

Family Events:

Hundreds of billions annually

No dominant family network exists today.

Slide 13 — Business Model

Premium Family Accounts

Advanced graph features

Family Cloud Storage

Photos

Videos

Archives

Event Services

Weddings

Invitations

Family Functions

Family Marketplace

Trusted vendors
Family recommendations

AI Services

Future Family Assistant
(Bhuchki)

Slide 14 — Current Status

Today:

- Working PWA
- Early Family Graph
- 30 users
- 100+ relationships mapped

Next:

- Android Launch
 - Improved Family Visualization
 - Public Beta
-

Slide 15 — Roadmap

Next 2 Months

First usable Android app.

Next 6 Months

Public family graph experience.

Next 24 Months

- 50,000 users
 - 10,000 families
 - 1M+ relationships mapped
-

Slide 16 — Founder

Ranveer Gautam

Solo Founder

Building Aangan full-time.

Driven by a belief that families deserve digital infrastructure designed specifically for them.

Slide 17 — Why We Win

Others focus on:

- Content
- Followers
- Messaging

Aangan focuses on:

- Relationships
- Family Identity
- Trust

We are not building another social network.

We are building the relationship layer for families.

Slide 18 — Fundraising

Raising ₹75L - ₹1.25Cr

To:

- Launch Android App
- Build Core Team
- Improve Family Graph
- Acquire Early Users
- Establish Product-Market Fit

Expected Runway:

18-24 Months

Slide 19 — Use of Funds

40% Product

25% Team

20% Growth

10% Infrastructure

5% Legal & Compliance

Slide 20 — Vision

Every Person

Every Relationship

Every Generation

Aangan is building the world's Family Graph.

Now, before we turn this into the **Angel Deck**, I would make one major improvement:

The current narrative is logical.

Angel investors invest emotionally first and logically second.

So the Angel version should begin with:

"Do you know how you're related to the person sitting next to you?"

That nostalgia, curiosity, and belonging story you described earlier is extremely powerful and should become the opening hook of the Angel deck. The Accelerator deck, however, should start directly with the problem and market opportunity.

Please Proceed.

Great. Now let's build the **Angel Investor Version**, because that is realistically your first fundraising target.

Angels invest in:

- Founder
- Conviction
- Story
- Market Insight

They rarely invest because of perfect metrics.

Aangan Angel Deck

Slide 1

Do You Know How You're Related?

Almost every Indian has heard a version of:

"He's actually my relative."

Or discovered:

"Our grandfathers knew each other."

Or realized:

"We're connected through marriage."

That moment creates instant trust, belonging and curiosity.

Yet no digital platform is designed around those relationships.

Slide 2

Family Is Humanity's Oldest Social Network

Before:

- Facebook
- Instagram
- WhatsApp
- LinkedIn

There was family.

Family remains the most trusted network in human society.

Yet it remains largely disconnected in the digital world.

Slide 3

The Problem

Family information is scattered.

Across:

- WhatsApp groups
- Wedding albums
- Personal memories
- Government records
- Individual phones

The result:

Families become fragmented generation after generation.

Slide 4

A Personal Observation

Growing up in India, I repeatedly saw people trying to answer questions like:

- How are we related?
- Who belongs to our extended family?
- Which relatives live nearby?
- Where did our family come from?

The answers existed.

The connections didn't.

Slide 5

Introducing Aangan

Aangan helps families:

- Discover relatives
- Understand relationships
- Preserve memories
- Stay connected across generations

All through a living family network.

Slide 6

The Family Graph

Users add:

- Mother
- Father
- Brother
- Sister

As relatives join:

The network grows automatically.
Families don't build static trees.
They participate in a living graph.

Slide 7

Why People Join

Immediate value:

- ✓ Discover relatives
- ✓ Understand connections
- ✓ Family-only sharing
- ✓ Family events
- ✓ Private memories

Long-term value:

A digital family legacy.

Slide 8

Why This Matters

Aangan isn't solving messaging.
WhatsApp already solved messaging.
Aangan is solving:
Relationship Discovery.
Family Identity.
Belonging.
Trust.

Slide 9

Why Now

AI.
Graph Databases.
Global Families.
For the first time, building a large-scale Family Graph is technically possible.

Slide 10

Market Opportunity

India:

1.4 Billion People

Global:

8+ Billion People

Every person belongs to a family.

No dominant family network exists today.

Slide 11

Business Model

Premium Features

Family Cloud Storage

Event Services

Marketplace

Future AI Family Assistant

Slide 12

Progress So Far

- Working PWA
 - 30 users
 - 100+ mapped relationships
 - Active product development
-

Slide 13

Founder

Ranveer Gautam

Final-year engineer working full-time on Aangan.

Building the digital infrastructure families never had.

Printed using [ChatGPT to PDF](#), powered by PDFCrowd [HTML to PDF API](#).

Slide 14

The Ask

Raising ₹75L–₹1.25Cr

To:

- Launch Android app
- Build initial team
- Reach product-market fit
- Expand the Family Graph

Slide 15

Vision

Every Person.

Every Relationship.

Every Generation.

Aangan is building the world's Family Graph.

Accelerator Deck (YC / Antler / Techstars)

This deck should be completely different.

Accelerators don't care about nostalgia.

They care about:

- Problem
- Solution
- Market
- Founder

The first slide becomes:

Aangan

Building the Family Graph

Then immediately:

Problem → Solution → Why Now → Product → Growth Loop → Founder.

No emotional storytelling.

No long history.

Just clarity.

One Important Change I'd Make

I would stop saying:

"Universal Family Graph"

and start saying:

Family Graph

Everywhere.

Much easier.

Much cleaner.

Much stronger.

Because investors immediately understand:

Facebook → Social Graph

LinkedIn → Professional Graph

Aangan → Family Graph

That's a category-defining narrative.

Before we create the Accelerator version in full detail, there is one thing I want you to think about:

If Aangan becomes successful, what is the smallest action a user takes that creates value for everyone else?

For Facebook it was:

Add a friend.

For LinkedIn:

Add a professional connection.

For Aangan:

Add a family relationship?

Claim a profile?

Join a family branch?

The answer to that becomes the core growth loop slide, and growth loops are often the most important slide in accelerator applications.

What you described is actually very powerful.

But it is **not** the growth loop.
It's part of the **magic moment**.
Investors separate these concepts.

Growth Loop

The smallest action that creates value and causes growth.

For Facebook:

Add a friend.

For LinkedIn:

Connect with a colleague.

For WhatsApp:

Invite a contact.

For Aangan:

I would NOT say:

Add a Wife.

or

Add a Relationship.

Those are too specific.

Instead:

Add a Relative

That's it.

Simple.

Because when a user adds a relative:

1. The graph becomes richer.
2. New relationships become discoverable.
3. More profiles become claimable.
4. More people receive invitations.
5. More families join.

That is the growth loop.

The Magic Moment

Different thing.

This is the moment when the user says:

"Whoa."

The example you gave is exactly that.

Imagine:

You add your wife.

The system recalculates.

Suddenly:

- Her family branch merges.
- Existing distant relationships become closer.
- Entire family structures reorganize.

The user realizes:

"I wasn't creating a family tree."

"I was revealing a family graph."

That's magical.

Put that in the Product slide.

Not the Growth slide.

What I Would Tell Investors

Not:

Adding a wife changes the whole network.

Too technical.

Instead:

That's investor language.

What I Think Is Actually Happening

After months of discussing Aangan, I think the core action is:

Add a Relative

The core asset is:

Family Graph

The core network effect is:

Relationship Discovery

And the magic moment is:

Discovering a connection you didn't know existed.

That last one is extremely important.

Because that's what makes people tell others:

"You won't believe this, but Aangan showed me that..."

Word-of-mouth starts there.

The Bigger Insight

You keep describing:

Finding relatives.

But I think the deeper value is:

Revealing relationships.

Those are different.

Finding relatives means:

I found my cousin.

Revealing relationships means:

I discovered how I'm connected to someone.

The second one is much bigger.

It works for:

- cousins
- in-laws
- distant relatives
- future marriages
- community connections
- family history

Everything.

If I Were Writing The Accelerator Deck

The Growth Loop slide would literally be:

Growth Loop

1. User joins Aangan
2. Adds relatives
3. Family Graph becomes richer
4. New relationships become discoverable
5. More relatives are invited
6. More users join
7. Graph value increases

Repeat.

Simple.

Clear.

Investor-friendly.

And honestly, I think we have finally found the sentence that explains Aangan best:

Aangan helps people discover and understand family relationships through a living Family Graph.

That is much clearer than "family social network," and much more ambitious than "family tree app."

Then please continue.

Excellent.

Now we're no longer building slides.

We're building the **investment thesis**.

And I think we've finally reached the point where Aangan becomes understandable to investors.

The Investment Thesis

Investors don't invest in features.

They invest in a belief.

The belief behind Facebook was:

Everyone has a social identity.

The belief behind LinkedIn was:

Everyone has a professional identity.

The belief behind Aangan should be:

Everyone belongs to a family.

Simple.

Universal.

Easy to understand.

The One-Line Pitch

If an angel asks:

What is Aangan?

Answer:

Aangan is building the Family Graph — a living network that helps people discover, understand and preserve family relationships across generations.

Stop.

Don't explain more.

Let them ask questions.

What Is The Family Graph?

This needs its own slide.

Traditional Family Trees

- Static
 - Manual
 - Isolated
 - Owned by one family
-

Aangan Family Graph

- Living
- Collaborative
- Self-growing
- Connected across families

Example:

Today:

Me $\longleftrightarrow$ Wife

Tomorrow:

Two family branches merge.

Hundreds of relationships become discoverable.

The graph reorganizes itself.

This is fundamentally different from a family tree.

The Most Important Slide In The Deck

I think this will become:

Why Aangan Exists

Imagine:

You meet someone.

You learn:

- They are your relative.
- Their grandfather knew your grandfather.
- Your families are connected.

Instantly:

- Trust increases.
- Familiarity increases.
- Curiosity increases.

Human relationships change.

Aangan digitizes this phenomenon.

The Category Creation Slide

Investors love category creation.

LinkedIn

Built the Professional Graph.

Facebook

Built the Social Graph.

Aangan

Building the Family Graph.

This slide alone will probably become the most memorable slide in the deck.

The Real Problem Slide

Most founders say:

Family memories are scattered.

Weak.

That's a symptom.

The deeper problem:

Family relationships are invisible.

People know:

- friends
- followers
- colleagues

But often don't know:

- relatives
- family branches
- lineage
- extended relationships

Aangan makes relationships visible.

What Investors Will Eventually Realize

The first use case is:

Relationship Discovery

The second use case is:

Family Communication

The third use case is:

Family Memories

The fourth use case is:

Family Events

The fifth use case is:

Family Services

The graph enables everything.

The graph is the asset.

The Network Effect Slide

This should be visual.

User joins.

↓

Adds father.

↓

Adds mother.

↓

Adds siblings.

↓

Relatives become discoverable.

↓

New relatives join.

↓

Graph grows.

↓

Graph becomes more useful.

↓

More relatives join.

Repeat.

Notice:

The graph gets stronger because of participation.

Not because of content.

This is important.

The Defensibility Slide

You asked:

Why can't WhatsApp do this?

Your answer should be:

WhatsApp owns conversations.

Aangan owns relationships.

Meta can copy features.

They cannot instantly recreate a Family Graph containing millions of verified relationships.

That becomes the moat.

What Success Looks Like

You struggled with the 24-month target.

I think we should measure:

Users

50,000+

Families

10,000+

Relationships

1,000,000+

The third metric matters most.

Because relationships are the asset.

The Founder Narrative

This is how I'd position you.

Not:

Final-year student.

Not:

Solo founder.

Those are facts.

Investors remember stories.

Instead:

The Raise

After everything we've discussed, my recommendation is:

Angel Round

₹75L–₹1.25Cr

Why?

Because you need:

- Incorporation
- Android launch
- Core team
- Infrastructure
- Design
- Marketing experiments
- 18–24 month runway

Anything much smaller may leave you fundraising again before you've validated the core graph.

What Happens Next

The narrative is now strong enough.

The next deliverables should be:

1. Angel Investor Deck (15–18 slides)

Goal:

Raise ₹75L–₹1.25Cr.

2. Accelerator Deck (10–12 slides)

Goal:

YC, Antler, Entrepreneur First, Techstars.

3. One-Page Investor Memo

A single-page document explaining:

- Problem
- Solution
- Market
- Founder
- Ask

Many angels will read this before opening the deck.

At this point, I don't think we need more strategic answers from you before drafting those. The remaining work is mostly packaging the story, sharpening the wording, and making sure every slide reinforces the same core idea:

Aangan is building the Family Graph.

What about the Accelerator Deck, It wasn't completed. We went on to discuss the "what is the smallest action a user takes that creates value for everyone else?" ?

Please complete the Accelerator deck.

Absolutely. In fact, the **Accelerator Deck is the most important deck right now**, because accelerators are far more likely to fund Aangan at this stage than traditional VCs.

And yes, the Growth Loop slide was incomplete until we figured out:

The smallest action = Add a Relative

Now we can finish it.

Aangan Accelerator Deck (YC / Antler / Techstars)

Accelerators don't want storytelling.

They want:

- Clear problem
- Clear solution
- Large market
- Strong founder
- Obvious growth loop

Typically 10-12 slides.

Slide 1

Aangan

Building the Family Graph

A living network that helps people discover, understand and preserve family relationships across generations.

Slide 2

Problem

The internet has digitized:

- Friends
- Followers
- Colleagues

But not families.

Family relationships remain fragmented across:

- Memory
- WhatsApp groups
- Albums
- Records

People often don't know:

- How they're related
 - Which relatives are nearby
 - Their broader family network
-

Slide 3

Why Existing Solutions Fail

Family Trees

- Static
- Manual
- Hard to maintain

Social Networks

- Built around content

- Not relationships

Messaging Apps

- Built around communication
- Not family structures

No platform maps family relationships.

Slide 4

Solution

Aangan creates a living Family Graph.

Users:

1. Join
2. Add close relatives
3. Discover existing connections
4. Expand the graph

The network continuously evolves as more family members join.

Slide 5

Product

Family Graph

Understand relationships.

Relative Discovery

Find family connections.

Family Feed

Private family interactions.

Family Events

Family coordination.

Family Memories

Shared family archives.

Slide 6

Why Now

Three trends make this possible:

AI

Relationship understanding.

Graph Databases

Large-scale family mapping.

Distributed Families

Families increasingly live across cities and countries.

For the first time, a Family Graph can exist at scale.

Slide 7

Growth Loop

This is the critical accelerator slide.

User joins

↓

Adds a relative

↓

Family Graph becomes richer

↓

New relationships become discoverable

↓

Additional relatives receive invitations

↓

More users join

↓

Graph value increases

↓

Repeat

This is the slide YC partners will spend time on.

Because it answers:

Why does this grow?

Slide 8

Network Effects

Every additional relative contributes:

- New relationships
- New family branches
- New discovery opportunities

The graph becomes more valuable for every participant.

Similar to:

LinkedIn → Professional Graph

Facebook → Social Graph

Aangan → Family Graph

Slide 9

Market

India

1.4 Billion People

Global

8+ Billion People

Every person belongs to a family.

No dominant family network exists today.

Slide 10

Progress

Current Status:

- Working PWA
- 30 users
- 100+ mapped relationships
- Family Graph architecture built

Next Milestones:

- Android App
 - Public Beta
 - Family Discovery Features
-

Slide 11

Founder

Ranveer Gautam

Building Aangan full-time.

Observed that family remains one of society's strongest networks yet lacks dedicated digital infrastructure.

Started building Aangan to solve this problem.

Slide 12

Vision

Facebook mapped friendships.

LinkedIn mapped professional relationships.

Aangan is building the Family Graph.

Every Person.

Every Relationship.

Every Generation.

What YC Would Ask Next

If you ever get an interview, expect these questions:

Why isn't this just a family tree app?

You answer:

Family trees are static records.

Aangan is a living graph where relationships continuously evolve as people join.

Why won't Meta build this?

You answer:

Meta owns social interactions.

Aangan focuses on relationship mapping.

The core asset is the Family Graph itself.

What's the smallest action that drives growth?

You answer:

Adding a relative.

Every relative enriches the graph, creates new discovery opportunities, and invites additional participants into the network.

What metric matters most?

This is where I'd refine your earlier answer.

Don't say:

Users.

Say:

Relationships Mapped

Because that's the asset.

Examples:

- Facebook → Daily Active Users
- LinkedIn → Professional Connections

- Aangan → Family Relationships Mapped

That's the metric that demonstrates the graph is getting stronger.

One more thing: if I were applying to YC with Aangan, I would actually make the deck even shorter—around **8 slides**—and spend more effort on the YC application answers themselves. For accelerators, the application often matters more than the deck. The deck is mainly there to support the narrative.
